Investment Manager Commentary

Indonesia macro economy painted a mixed picture, still subdued in consumption related activities but started to show stability and improved risk perceptions. Inflation came in at +0.07% MoM in May, the lowest in the Eid month since 1989. On a year-on-year basis, inflation is now +2.19%YoY, down from +2.67% YoY in April. Food registered a deflation of -0.08ppt. Low inflation was caused by weak demand, from weak purchasing power. Large scale social distancing resulted in limited economic activities. Weak demand is reflected at low core inflation of +2.65%, down from +2.85% in the previous month. The accommodative monetary and fiscal stimulus given by the Government has been supporting stability. Rupiah appreciated +1.8% MoM, outperforming most of the currencies in ASEAN. Bank Indonesia's 7 Day Reverse Repo remains 4.5% in May. Portfolio performance was higher than the benchmark due to the higher special profit sharing given by the time deposit placement banks.
