- 1) Annualized (1 year = 365 days) and using compound method (for products that have been more than one year old since inception).
- 2) The Benchmark is net after tax of average 3-months IDR time deposit's interest rates.
- 3) The Net Asset Value / Unit has calculated the costs, including fees related to transaction and transaction settlement as well as administration and recording.

### Investment Manager Commentary

Entering April, Indonesia's macro economy continued to show recovery. GDP growth in first quarter only contracted -0.7% YoY compared to -2.2% YoY in the previous quarter, supported by high net exports as well as improvements in consumption and investment sectors. Inflation increased by +0.13% MoM, or +1.42% YoY. Food prices contributed +0.05ppt mainly driven by higher prices for chicken, cooking oil and cigarettes. The increase in food prices is not too high, even though it is in the peak harvest period in April. On the other hand, core inflation fell to 1.18% YoY from 1.21% YoY in March, mainly triggered by lower car prices due to tax policies with certain criteria, while the impact of last year's gold price hike has diminished. Bank Indonesia's 7 Day Reverse Repo remains 3.5% in April.
