Note

- 1) Annualized (1 year = 365 days) and using compound method (for products that have been more than one year old since inception).
- 2) The benchmark is Jakarta Composite Index in USD terms.
- 3) Based on GICS (Global Industrials Classification Standard).
- 4) The Net Asset Value / Unit has calculated the costs, including fees related to transaction and transaction settlement as well as administration and recording.

Investment Manager Commentary

Despite the challenges, Indonesia's equity market strengthened in July and net foreign inflow came in at IDR975.92 billion. It was supported by the top gainers: technology sector and consumer cyclicals. Indonesia macro indicators continued showing recovery. GDP growth for 2Q21 came in at +7.07% YoY mainly because of low-base effect and strong exports, while domestic consumption, investment and government spending have improved. Minister of Finance announced lower preliminary estimate of GDP growth this year to 3.7%-4.5%, from 4.5%-5.3% previously. Rupiah strengthened 0.26% toward USD. Portfolio allocation in consumer staples and communication services contributed positive attribution, meanwhile allocation in real estate and IT contributed negative attribution to performance.
