Investment Manager Commentary

Bond market was volatile in June amid various sentiments from global dan domestik markets. On the global front, The Fed was less dovish by revising expectation of first rate hike forward to 2023 from previous estimate of 2024, as US economic recovery and vaccination progress were better than expected. However, overall Fed monetary policy remain very accommodative with interest rate at very low level and asset purchases would continue until substantial further recovery has been made. On the domestic front, rising COVID-19 cases forced the government to implement tighter social restriction (PPKM) that limits mobility, and also push for quicker vaccination. With this measure the government expects a more sustainable economic and confidence recovery, despite of short-term impact to economic recovery. Overall Indonesia macroeconomic data remain supportive, with foreign reserves rose to USD137.1 billion and exports grew 58.8% YoY, resulting in trade balance surplus of USD2.4 billion. Portfolio allocation in short-tenor bonds posted positive contribution for the portfolio in Juni.
