Investment Manager Commentary

Indonesia equity and bond market posted positive performance in August as global and domestic sentiment were supportive. On the global front, the US CPI print was lower than expected, recorded at 8.5% YoY in July, versus 9.1% YoY the previous month, and was considered by the market as a confirmation that US inflation has peaked. On the domestic front, Indonesia macroeconomic indicators continued showing recovery. The current account surplus widened to +0.7% of GDP in first half of 2022 from +0.3% of GDP in 2021. The above is resulted from strong exports which supported a USD15.6b trade surplus in second quarter of 2022. Bank Indonesia raised benchmark rate by 25bps to 3.75% as pre-emptive measure to anticipate higher domestic inflation. The move was welcomed by the market as foreign investors posted net buy USD508 million in Indonesia equity and Rupiah was stable at around 14843 per USD.
