Investment Manager Commentary

Equity and bond market was volatile in January, mainly affected by global sentiment. Uncertainty on The Fed's policy weighs on the market following The Fed's hawkish statement in early January that opens the possibility of rate hike in Q1-2022. On the domestic front, Indonesia macro indicators continued showing recovery. GDP growth picked up from 3.5% YoY in 3Q21 to 5.0% in 4Q21, as a decline in Covid-19 cases and an easing of restrictions led to a rebound in activities. Household consumption was the main driver. Inflation increased 0.56% MoM, bringing the annual inflation to 2.18% YoY from 1.87% in the previous month indicating demand recovery. Meanwhile, Bank Indonesia began tightening its policy by announcing that it would raise the reserve requirement ratio (RRR) gradually starting March to September this year. We believe liquidity will remain ample as Bank Indonesia has injected liquidity of more than IDR800t since 2020, and it will continue supporting liquidity through the IDR214t burden sharing scheme. Both equity and bond allocations were negative for the portfolio.
