- 3) Based on GICS (Global Industrials Classification Standard).
- 4) The Net Asset Value / Unit has calculated the costs, including fees related to transaction and transaction settlement as well as administration and recording.

Investment Manager Commentary

Indonesia equity posted positive performance in March, continuing its stronger trend year-to-date. Indonesia is seen in a sweet spot amid current global volatility. Indonesia GDP growth is expected to recover stronger this year supported by lower Covid-19 case and improvement in mobility ahead of Ramadan. Indonesia is also a net exporter of commodity that benefit from rising global commodity prices. A mixture of these factors create a favorable condition for Indonesia equity and improve investors' appetite on Indonesia equity. Foreign investors posted net buy of USD584 million in Indonesia equity. Domestic inflation rose to 2.64% YoY, however Bank Indonesia maintains its accommodative stance to support recovery. Portfolio allocation in materials and consumer discretionary contributed positive attribution, meanwhile allocation in energy and financials contributed negative attribution to performance.
