Investment Manager Commentary

Indonesia financial market was varied in March. Equity market posted positive performance, while the bond market fell. Indonesia equity is seen in a sweet spot amid current global volatility. Indonesia GDP growth is expected to recover stronger this year supported by lower Covid-19 case and improvement in mobility ahead of Ramadan. Indonesia is also a net exporter of commodity that benefit from rising global commodity prices. A mixture of these factors create a favorable condition for Indonesia and improve investors' appetite on Indonesia equity. Foreign investors posted net buy of USD584 million in Indonesia equity. Meanwhile the bond market was under pressure due to global sentiment from Fed aggressive pivot and Russia - Ukraine conflict. Domestic inflation rose to 2.64% YoY, however Bank Indonesia maintains its accommodative stance to support recovery. Equity allocation in the portfolio supported performance in March.
