	12.69%						

### Note

- Annualized (1 year = 365 days) and using compound method (for products that have been more than one year old since inception).
- The benchmark is IDX SMC Liquid Index in USD terms.
- Based on GICS (Global Industrials Classification Standard).
- The Net Asset Value / Unit has calculated the costs, including fees related to transaction and transaction settlement as well as administration and recording.

### Investment Manager Commentary

Amid a sell-off by foreign investors that recorded an outflow of USD242.78 million, the Indonesia medium-small capitalization stock market rose slightly higher in May, led by strengthening of the energy and materials sectors. Rupiah depreciated 0.66% against the US dollar, weaker compared to currencies in peers in ASEAN 4. Issues related to US monetary tightening, Russia Ukraine conflict, China lockdown, and its impact to global economic growth, supply chain and inflation weighed on market sentiment. Bank Indonesia continues its stance not to rush increasing rates and stated that core inflation will become a major indicator for making such decisions. BI is in the opinion that inflation will hover around the top range of its inflation target (~4%). Indonesia economic exposure that remains positive is an attraction for long-term investment in Indonesia. Portfolio allocation in financials and consumer discretionary contributed positive attribution, meanwhile allocation in communication services and consumer staples contributed negative attribution to performance.
