### Investment Manager Commentary

Indonesia equity and bond market weakened in May. In equity market foreign investors book a net outflow of USD242.78m following months of strong inflows. Rupiah depreciated 0.66% against the US dollar, weaker compared to currencies in peers in ASEAN 4. Issues related to US monetary tightening, Russia Ukraine conflict, China lockdown, and its impact to global economic growth, supply chain and inflation weighed on market sentiment. The government confirmed that there would be no increase in the prices of subsidized fuel, LPG, and electricity in 2022 on the back of positive surprises on the government's revenue. On the monetary side, Bank Indonesia kept its rates steady at 3.50% to control inflation, maintain Rupiah's stability, and support economic growth, while announcing a more aggressive path of Reserve Requirement Ratio (RRR) hikes than previously planned. Indonesia economic exposure that remains positive is an attraction for long-term investment in Indonesia.
