Note

- Annualized (1 year = 365 days) and using compound method (for products that have been more than one year old since inception).
- The benchmark is 85% JCI Index + 15% FTSE Developed Index.
- Based on GICS (Global Industrials Classification Standard).
- The Net Asset Value / Unit has calculated the costs, including fees related to transaction and transaction settlement as well as administration and recording.

Investment Manager Commentary

Indonesia equity market was slightly down, underperforming the regional, emerging market and the global market. There was a low net foreign inflow of USD45m. Foreign investor flow started to shift to other regions after being a net positive YTD to Indonesia. Bank Indonesia continued to raise the 7-DRRR by 50 bps to 5.25% in November. Benchmark rate is expected to reach its highest in 1H23 to support the attractiveness of Rupiah and Indonesia financial assets. The economy reopening and high corporate earnings growth will provide supports for Indonesia equity market. More positive global sentiment conditions supported the strengthening of the developed stock market. Portfolio allocation in materials contributed positive attribution, meanwhile allocation in financials and communication services contributed negative attribution to performance.
