Note

- Annualized (1 year = 365 days) and using compound method (for products that have been more than one year old since inception).
- 2) The benchmark is Bloomberg Barclays EM I01378US Index.
- 3) The Net Asset Value / Unit has calculated the costs, including fees related to transaction and transaction settlement as well as administration and recording.

Investment Manager Commentary

High volatility in UST yields puts pressure on INDON. The UST yield jumped to 4.24% for the first time since 2008, before dropping to 4.05%. The market correction is still dominated by global sentiment where stronger-than-expected US economic data could influence the Fed to remain hawkish for longer, as implied in the latest FOMC minutes. In the minutes policymakers emphasized that the costs of taking too little action to reduce inflation are likely to outweigh the costs of taking too many actions that could lead to excessive tightening. US inflation in September recorded a higher-than-expected figure of 8.20% YoY vs consensus of 8.10% and previous data 8.30%. The yield curve varies, with the yield in the short tenor falling while the yield in the medium tenor rising.
