Investment Manager Commentary

Indonesia stock market was outperformed the global and Asia market. After posting positive inflows in previous months, foreign investors posted a negative outflow of USD1.3 billion in August. Indonesia strong fundamentals i.e., strong fiscal, manageable inflation and currency, stable GDP growth and healthy debt ratios, near-peak Fed Funds Rate and disappointing China recovery post economy reopening could support appetite of foreign investors to Indonesia. Indonesia equity is trading at attractive valuation, much lower than the average in the past ten years. Portfolio allocations in materials and consumer discretionary contributed positive attributions, meanwhile allocations in industrials and health care contributed negative attributions to performance.
