Investment Manager Commentary

Indonesia equity market posted positive performance in July as global market sentiment turned more optimistic. Lower than expected inflation and resilient economic data in the US raised hope that recession can be avoided. On the domestic front, Indonesia macroeconomic condition remain strong, seen at goldilocks zone with economic growth stronger while inflation continue to moderate. Indonesia Q2 GDP grew 5.17% YoY, higher than expected supported by strong domestic consumption, while inflation continue to moderate to 3.08% from 3.52% the previous month. Lower inflation level creates monetary space for rate cut, however Bank Indonesia reiterated that policy focus at the moment is Rupiah stability, thus retaining benchmark rate on hold at 5.75%. Portfolio allocation in IT and industrials contributed positive attribution, meanwhile allocation in energy and materials contributed negative attribution to performance.
