Investment Manager Commentary

Indonesia equity market was negative in May. Weaker domestic investor sentiment weigh on the market, while foreign investor remains net buyer of USD109.5 million in the month. External uncertainty overshadows the market where concern on fading China recovery momentum pressures commodity prices. Uncertainty on US debt ceiling negotiation also weighs on the market during the month. Despite of external volatilities, domestic macro condition remain supportive. Inflation continues to moderate in May to 4% YoY, back to BI's target range 2%-4% that opens the possibility of rate cut. Amid expectation of slower global growth, Indonesia economy is one of the fastest growing economies in the world with strong trade balance are likely to remain attractive for global investors that continue to be net buyer of Indonesia equity. Portfolio allocation in energy and communication contributed positive attribution, meanwhile allocation in industrial and financials negative attribution to performance.
