Investment Manager Commentary

Indonesia equity market rebounded in November supported by expectations that The Fed has reached peak rate which led to better market sentiment, lower US Treasury yield, and weaker USD. The Fed held its rates steady at 5.25%-5.50% in the latest FOMC meeting and repeatedly delivering their message of being patient. Meanwhile, US economic datat showed signs of slowing down that raises market expectation The Fed has reached its peak rate and potentially can pivot more accommodative in 2024. On the domestic side, Indonesia macro indicators remain stable with inflation at 2.9% YOY still within Bl's target range. Bank Indonesia keeps its policy rate at 6% and restated commitment to the Rupiah stability. Portfolio allocations in real estate and utilities contributed positive attributions, meanwhile allocations in materials and energy contributed negative attributions to performance.
