Investment Manager Commentary

Expectations on The Fed's "higher for longer" rate policy as inflation remains high while increased tension in the middle east triggered speculations on increased energy prices added pressure on global financial market. The 10-year UST yield broke the 5% level, highest since 2007, and DXY index continued strengthening, further worsened market volatilities. As such, equity markets everywhere were corrected. Indonesia equity market was down but still outperforming the global market, emerging market and Asia Pacific ex Japan. Indonesia equity is trading at attractive valuation, much lower than its average in the past ten years. Portfolio allocations in real estate and consumer staples contributed positive attributions, meanwhile allocations in materials and energy contributed negative attributions to performance.
