Investment Manager Commentary

Several emerging data continue to reaffirm the narrative that The Fed will not rush to cut interest rates. The above have resulted in revised market expectations on the amount and timing of Fed Funds rate cuts and speculations on US economy, including a "no landing" scenario. The above has resulted in higher USD. It put pressure on the Rupiah. Weaker exchange rate, speculation on Fed monetary policy and geopolitical dynamics in the Middle East resulted in equity market correction. Indonesia equity market depreciated. Foreign investors posted negative outflow of USD1.1 billion. Indonesia equity is trading at attractive valuation, much lower than its average in the past ten years. Portfolio allocations in industrials and materials contributed positive attributions, meanwhile allocations in utilities and consumer discretionary contributed negative attributions to performance.
