Investment Manager Commentary

Equity market was volatile in September, in which the market was relatively positive up to mid-September following rate cut from The Fed and Bank Indonesia. The Fed cut benchmark interest rate by 50bps, an aggressive start to its first easing in four years. This marks the beginning of long rate cycle, with Fed's dot plot indicates further cut of another 50bp cuts by YE24, 100bp cuts by YE25 and 50bp in 2026. Bank Indonesia also surprised by cutting BI Rate 25bps as the Central Bank sees strong IDR and anticipates Fed cut. However, the market turned weaker in the last week of September as China announced fresh stimulus that led to strong foreign inflow to Chinese equities, while reducing holding in other EM markets, including Indonesia. Chinese equity index CSI 300 rose 21% in the month driven by significant inflow to the Chinese market. India equities suffered similar fate to Indonesia equities, though at more manageable magnitude. India equity index Nifty managed to post positive performance 2.3% in September. Portfolio allocations in utilities contributed positive attributions, meanwhile allocations in consumer discretionary contributed negative attributions to performance.
