Investment Manager Commentary

Indonesia and India equities were volatile in the month. Global uncertainty continued to overshadow market sentiment, with The Fed indicating hawkish posture due to persistent inflation. The market also awaits US tariff policy, as President Trump signaled tariff against Canada, Mexico, and China in 1 February. Bank Indonesia surprised the market by cutting BI Rate 25bps, and signaled shift in policy focus from Rupiah stability to more balanced stance of growth and stability. BI highlights weaker domestic growth and low inflation as key reason to cut rates. Meanwhile, the government showed more urgency to support domestic growth. President Prabowo initiated budget efficiency of IDR306 trillion to be reallocated to program that support people's welfare. This followed earlier decision to cancel VAT hike in a bid to support purchasing power. Indonesia GDP growth came in at 5.02% in Q4-2024, higher than consensus expectation of 4.96%. However, household consumption was disappointing, which has remained below 5% for five consecutive quarters. Portfolio allocations in materials contributed positive attributions, meanwhile allocations in energy contributed negative attributions to performance.
