Investment Manager Commentary

Indonesia and India equities were volatile in February affected by highly dynamic market condition. The global market uncertainty heightened as the US Supreme Court strikes down President Trump's reciprocal tariffs. Trump government responded by implementing universal tariff 10% as replacement, which later raised to 15%. At the end of the month, the market shocked by US-Israel strike on Iran, which triggered concerned of protracted conflict that risks higher oil prices and global inflation. On the domestic front, the market surprised by Moody's downgrade of Indonesia's outlook from stable to negative while maintaining rating at Baa2. Moody's highlights weaker government's policy predictability that could erode policy credibility. Government reported fiscal deficit IDR54.6 trillion (-0.26% of GDP) in January 2026, wider than deficit of -0.1% of GDP in January 2025, which raised the concern of the government's fiscal discipline. On the positive note, GDP growth came in stronger than expected at +5.39% YoY in 4Q-2025, the highest growth since 3Q-2022, driven by stronger household consumption. Portfolio allocations in energy contributed positive attributions, meanwhile allocations in IT contributed negative attributions to performance.
