Investment Manager Commentary

The bond market weakened in June. On the global front, the first FOMC meeting under Kevin Warsh as Chairman of the Federal Reserve drew significant attention due to a substantially shorter policy statement, the removal of forward guidance, and a shift in the median interest rate projections, signaling a higher-for-longer interest rate outlook. On the domestic front, Bank Indonesia raised the BI Rate by a total of 50 basis points in June (including a 25bps off-cycle rate hike outside the regular monthly Board of Governors Meeting schedule) to support the Rupiah. Bank Indonesia also tightened fx purchase regulations by lowering the transaction threshold requiring supporting documentation from USD 25,000 to USD 10,000. Meanwhile, the government signaled a more market-friendly policy stance by reducing budgets for the MBG program and Koperasi Desa, increasing non-subsidized fuel prices, and revising and/or canceling several policies that were perceived as unfriendly to investors. In addition, the government reaffirmed its commitment to maintaining the fiscal deficit below 3% of GDP. However, uncertainties remain for the market. MSCI continues to place the Indonesian equity market under review until the November review period, while investors are also awaiting the outcome of S&P Ratings sovereign credit rating review of Indonesia. Bond yield rose across the yield curve, where the 5-year yield rose +34bps, and the 10-year yield rose +42bps.
