Investment Manager Commentary

Indonesia's financial markets faced renewed volatility throughout September, driven by rising US Treasury yields, a stronger US dollar, and expectations of tighter global monetary policy. The Fed raised its policy rate by 25 bps, in line with expectations, while maintaining a hawkish stance and signaling the potential for further rate hikes. The 10-year US Treasury yield rose to 5.28%, its highest level since 2007, amid concerns over inflation, higher interest rates, and elevated US debt levels. Bank Indonesia kept the BI Rate unchanged at 5.75% at its September meeting, with policy remaining focused on maintaining rupiah and inflation stability. September inflation edged up to 3.28% YoY from 3.19% in August, mainly driven by higher food prices, although it remained within Bank Indonesia's 2.5% ±1% target range. Economic activity indicators provided more constructive signals. The manufacturing PMI returned to expansion territory, rising to 52.4 in September from 49.8 in August, with output and new orders recording their fastest growth since February. The trade surplus widened to USD3.55 billion in August from USD122 million previously. President Prabowo also reshuffled cabinet and appointed Suahasil Nazara as Finance Minister, who reaffirmed his commitment to keeping the fiscal deficit below 3% of GDP. Bond yield rose across tenors, where the 5-year yield rose +68bps, and the 10-year yield rose +54bps.
