

ULASAN MAKROEKONOMI

Data makroekonomi Indonesia kembali menunjukkan perbaikan di bulan Oktober. Neraca perdagangan kembali mencatatkan surplus sebesar USD 1.02 miliar di bulan September, naik dari bulan sebelumnya USD 434 juta. Ekspor mengalami pelemahan 18% YoY, dan impor juga mengalami pelemahan 26% YoY. Penurunan tingkat impor terutama disebabkan oleh impor migas yang menurun 48% YoY. Data PDB juga menunjukkan perbaikan, naik ke level 4.7% di kuartal III-2015 dari 4.67% di kuartal sebelumnya, menunjukkan stabilisasi pada komponen konsumsi dan belanja modal.

Inflasi mengalami perbaikan, mencapai level 6.2% YoY di bulan Oktober, turun dari 6.8% di bulan September dan lebih baik dari ekspektasi konsensus di level 6.4%. Turunnya harga BBM dan bahan pangan menjadi faktor utama yang meredakan tekanan inflasi. Kami menilai inflasi masih akan cenderung turun di kuartal keempat 2015, mencapai target Bank Indonesia (BI) di kisaran 4% ±1%, setelah efek kenaikan harga BBM tahun lalu terhapus.

Nilai tukar rupiah menguat terhadap USD di bulan Oktober didukung oleh mulai pulihnya keyakinan investor terhadap pasar negara berkembang. Nilai tukar Rupiah ditutup pada level IDR 13,408 per USD di akhir bulan Oktober, menguat 6.61% dari posisi IDR 14,653 di awal bulan, dan kinerja tahun berjalan membaik di bulan Oktober ke level -10.05%. Sementara itu cadangan devisa turun menjadi USD101.72 miliar di bulan September dari USD 105.35 miliar di bulan sebelumnya

MACROECONOMY REVIEW

Indonesia's macroeconomic numbers continued to paint a positive tone in October. The latest data release (September) showed another trade surplus, climbing to USD 1.02bn from USD 434mn in August. Exports continued to fall at a slower rate (-18% YoY) than imports (-26% YoY). The slowdown in imports was most visible in Oil and Gas (-48% YoY). Third quarter GDP growth came in at 4.73% YoY, up from 4.67% the previous quarter, showing encouraging stabilization in Consumption and Capital Expenditure.

Inflation improved for the third consecutive month, reaching 6.2% YoY in October (vs. 6.8% in September and consensus expectation of 6.4%). Lower fuel and food prices continued to ease inflationary pressures. We continue to expect inflation figure to soften in 4Q 2015 due to high base effect from the fuel price hike last year and reach Bank Indonesia's target range of 4% ±1%.

The IDR significantly strengthened against the greenback, as investor confidence was restored for emerging market space. The IDR closed at IDR 13,408 per USD or significantly appreciated by 6.61% from IDR 14,653 per USD in the beginning of the month, bettering its year-to-date depreciation to 10.05%. Indonesia's foreign exchange reserve position decreased to USD 101.72 Billion in September from USD 105.35 Billion in previous month.

SAHAM

IHSG mengalami penguatan 5.47% di bulan Oktober ditutup di level 4,455.2. Pasar saham Indonesia mengungguli kinerja pasar saham regional dalam bentuk USD. Investor asing membukukan pembelian bersih senilai USD 588 juta di pasar saham

Investor menyambut positif penguatan Rupiah, perbaikan makroekonomi, dan paket kebijakan ekonomi pemerintah yang mendukung. Sementara dari sisi global pasar didukung oleh ekspektasi bahwa The Fed akan melanjutkan kebijakan moneter longgar di tahun 2016, menyusul data ketenagakerjaan AS yang lemah. Sementara itu bank sentral Eropa memberi sinyal mengenai kemungkinan stimulus tambahan dan/atau tingkat suku bunga negatif. Di Asia, USD bergerak melemah menyusul keputusan bank sentral Jepang untuk tidak meningkatkan stimulus, dan bank sentral China yang terus berupaya untuk meningkatkan konvertabilitas Yuan.

Bulan Oktober 2015 menunjukkan bagaimana perbaikan indikator makroekonomi dapat memberikan fondasi kuat bagi pasar saham Indonesia. Memasuki penghujung tahun 2015, kami menilai apabila sentimen positif dapat dipertahankan maka hasil positif tambahan masih dapat terjadi.

The Jakarta Composite Index (JCI) rebounded strongly by 5.47% to close at 4,455.2. Indonesian stocks outperformed their regional counterparts in USD terms. Foreign investors bought back in great strength, totaling USD 588m in equities.

Investors reacted positively to the strong Rupiah, encouraging macroeconomic outlook as well as favorable government policies which include a fifth round of economic stimulus measures. From the global front, markets were buoyed by expectations that the Fed will remain easy into 2016, thanks to a weak US jobs report. Elsewhere, ECB's Draghi teased investors with possibilities of further stimulus and/or negative interest rates, while in Asia the US dollar was weakened by Bank of Japan refraining from further stimulus, and PBOC continuing steps to increase Yuan convertibility.

October 2015 showed us how improving macroeconomic indicators can provide a strong foundation for a rebound in Indonesian equities. Should positive trends remain on track, we look forward to more positive outcomes as we enter the final months of the year.

PENDAPATAN TETAP

Menggunakan HSBC Bond Index sebagai acuan, pasar obligasi Indonesia mencatatkan kinerja bulanan yang fantastis, menguat 6.15%, sehingga kinerja secara tahun berjalan kembali berada di teritori positif sebesar 1.50% dari bulan sebelumnya -4.39%.
